

Getting nowhere fast?

Are you aware that traditional tape backups can take up to 3 days to restore should your system fail.

Triumph Technologies can backup and restore any system, anytime, anywhere using TOD...

What is TOD?

Triumph Over Disaster (TOD) is a surrogate server system in the event of your main File Server suffering a catastrophic failure. Do you need to protect your critical data?

How does it work?

We install, manage and monitor a TOD Network Attached Storage device on your site onto which we backup a snapshot of your main server every 15 minutes. Should your Server fail, then we will respond immediately by delivering the redundant, fully functional Server from our site to yours and we can have you back in action in as little as 10 minutes.

What other options do I have?

The alternative would be to repair and rebuild your server from the last good overnight tape backup. However, it takes time to build a stable Server platform from an existing linear tape. Using traditional tape backups can take up to 3 days to rebuild a server. Call us for more information about your existing solution and how we can reduce your downtime.
